APPLICATIONS DEVELOPED

Final Transmissions
- An augmented reality storytelling application that renders 3D objects to the user's phone and tells a story based on proximity to a predetermined location.
- Collaborative project designed using Javascript, AR.js, A-frame, Axios, Pug, noSleep.js, node, and MySQL.

Trivia Fighter   live | github
- A superhero themed trivia game built dynamically using AJAX, Javascript, and jQuery for a fully functioning two player gaming experience.
- Served as co-designer for the overall look and Front-end Developer for the logic and functionality.

Trothello   live | github
- Based on the classic board game Othello, this single or multiplayer experience Tron themed application was built using Javascript, jQuery, HTML5, CSS3, and Model View Contoller.
- Created during a two day hack-a-thon by three developers.
